$26,800,000

OFFICE
Salem

Reser Stadium, home of OSU Beavers, was overhauled in phases from 2005–2023, adding seating, suites, new concourses, LED lighting, a wellness clinic, and top-tier game-day facilities.

The home of the Oregon State University Beavers has been completely overhauled since the 2005 season. In phase I, the east side of the stadium was replaced and expanded. The construction added suites, an upper-level Club and Loge sections as part of the stadium expansion. Concessions, restrooms and new concourses were included.

Phase II completed in 2007 added new precast concrete seating along with new concessions, bathrooms, and utility rooms behind the south end zone of Reser Stadium at Oregon State University. This 78,000' expansion included 10,000 new seats and required relocating the existing scoreboard. A brand new 40 x 80 ft jumbotron video board

The 2023 season saw the completion of Reser Stadium, featuring a new West Side with some of the best sightlines in the sport. One of the challenges of the project was to make the facility temporarily operational for one season including temporary lights and broadcast facilities. This expansion included replacing the sports lighting with a state of the art LED sports lighting system, building new press box, adding a new student welcome center and creating a new 32,000', year-round student wellness clinic.
